

Practice Quiz: Conditional Execution

Programming Exercise Guide

Before attempting this quiz you should write the following JavaScript program.

Write a JavaScript program to modify an image to put three vertical stripes on an image—red on the left one third, green in the middle, and blue on the right one third. For example, if your program ran on Drew's picture shown on the left, the resulting image would have a red, green and blue vertical stripe as shown in the image on the right.

The red stripe is made by changing the red of all the pixels in the left vertical third to 255, the green of all the pixels in the middle vertical to 255, and the blue of all the pixels in the right vertical third to 255.
